

Docket No. 111325-62  
Serial No. 09/867,754  
Page 2

IN THE CLAIMS:

1. (Withdrawn) A digital work recorded on computer readable media, said digital work comprising:
  - a content element including content data stored in an addressable memory to be utilized by an end user;
  - a content usage rights element associated with said content element and including data specifying usage rights for said content element; and
  - a flag element associated with said content element and having memory registers for saving flags, said memory registers corresponding to memory addresses of the addressable memory.
2. (Withdrawn) A digital work as recited in claim 1, further comprising, a flag usage rights element associated with said flag element and including data specifying rights for manipulating said flag element.
3. (Withdrawn) A digital work as recited in claim 1, wherein said flag element has flags stored therein at selected memory registers to demarcate a desired portion of said content data stored in memory addresses corresponding to the selected memory registers.
4. (Withdrawn) A digital work as recited in claim 3, wherein said flags comprise start flags and end flags to respectively indicate the beginning and end of said desired portion of said content data.
5. (Withdrawn) A digital work as recited in claim 1, wherein said flag element has a flag stored therein at a selected memory register and said flag comprises links to additional content data.
6. (Withdrawn) A digital work as recited in claim 1, wherein said content element is stored on a first computer readable medium and said flag element is stored on a second computer readable medium.

Page 3

7. (Withdrawn) A digital work as recited in claim 6, wherein said first computer readable medium is on a first device and said second computer readable medium is on a second device and wherein said first device and said second device are operatively coupled by a communication channel.

8. (Withdrawn) A digital work as recited in claim 7, wherein said communication channel comprises the Internet.

9. (Withdrawn) A digital work as recited in claim 7, wherein said flags are stored in selected registers to demarcate a portion of said content data that has been downloaded to said first device.

10. (Withdrawn) A digital work as recited in claim 1, wherein said content element is a laboratory notebook.

11. (Withdrawn) A digital work as recited in claim 3, wherein said content usage rights element specifies a first set of usage rights for the desired portion and a second set of usage rights for other portions.

12. (Withdrawn) A method of marking portions of content data of a digital work stored in addressable memory comprising:

associating a flag element with the content data, the flag element having memory registers for saving demarcation flags, said registers corresponding to memory addresses of the addressable memory;

selecting a desired portion of said content to be marked; and  
manipulating the flag element to place a flag in a memory register corresponding to a memory address of the desired portion of the content.

13. (Withdrawn) A method as recited in claim 12, further comprising associating a flag usage rights element with the flag element, the flag usage rights element including data specifying rights for said manipulating step.

Serial No. 09/867,754  
Page 4

14. (Withdrawn) A method as recited in claim 12, wherein said manipulating step comprises storing flags in the flag element at selected memory registers to demarcate the desired portion of said content data.
15. (Withdrawn) A method as recited in claim 14, wherein said manipulating step comprises storing start flags and end flags in the flag element to respectively indicate the beginning and end of the desired portions of the content data.
16. (Withdrawn) A method as recited in claim 12, wherein manipulating step comprises storing flags having links to additional content data.
17. (Withdrawn) A method as recited in claim 12, wherein said content element is stored on a first computer readable medium and said flag element is stored on a second computer readable medium.
18. (Withdrawn) A method as recited in claim 17, wherein the first computer readable medium is on a first device and the second computer readable medium is on a second device and wherein the first device and the second device are operatively coupled by a communication channel.
19. (Withdrawn) A method as recited in claim 18, wherein said communication channel comprises the Internet.
20. (Withdrawn) A method as recited in claim 18, wherein said manipulating step comprises storing flags in memory registers to demarcate a portion of said content that has been downloaded to said first device.
21. (Withdrawn) A method as recited in claim 14, further processing the desired portions.

Serial No. 09/867,754  
Page 5

22. (Withdrawn) A method as recited in claim 21, wherein said processing step comprises filtering the desired portion.

23. (Withdrawn) A method as recited in claim 21, wherein said processing step comprises compressing the desired portion.

24. (Withdrawn) A method as recited in claim 21, wherein said processing step comprises culling the desired portion from the content data and compiling a summary of the content data with the desired portion.

25. (Withdrawn) A method as recited in claim 24, wherein said compiling step is accomplished with an artificial intelligence algorithm.

26. (Withdrawn) A method as recited in claim 21, further comprising rendering the content data and wherein said processing step comprises rendering the desired portions in a manner different from other portions of the content data.

27. (Currently Amended) A computer readable medium having instructions for effecting a method for distributing digital works, said instructions comprising: instructions for receiving a request from a requesting device for downloading digital content data; instructions for associating a flag element with the content data, the flag element having memory registers for saving demarcation flags, said registers corresponding to memory addresses of the addressable memory said content data, said flag element having at least one memory register; instructions for downloading a portion of the said content data; and instructions for manipulating the flag element to place a flag in a memory register corresponding to a memory address indicating the downloaded portion of the content. said flag element to store at least one demarcation flag in at least one of said memory registers, wherein said memory registers correspond to memory addresses on an addressable memory indicating the downloaded portion of said content data whereby the downloaded

portion of the content data can be determined without accessing the content data.

28. (Currently Amended) ~~A method as recited in~~ The computer readable medium of claim 27, wherein said instructions for downloading step comprises instructions for downloading a portion of the said content data that will fit into the available memory of a device receiving the said content data.

29. (Currently Amended) ~~A method as recited in~~ The computer readable medium of claim 28, further comprising the step of instructions for determining the said available memory in the said device receiving the said content data, and

wherein said manipulating step instructions for manipulating said flag element comprises placing flag elements in instructions for storing at least one of said demarcation flags in at least one of said memory registers corresponding to memory addresses demarcating a portion of the content data that corresponds to the said content data, said demarcated portion corresponding to said available memory of the said device receiving the said content data, and

wherein said downloading step instructions for downloading a portion of said content data comprises instructions for downloading a portion of the said content data in memory addresses corresponding to the said demarcated portion.

30. (New) A method for distributing digital works to a computing device comprising: receiving a request, from a first computing device, at a second computing device, for downloading digital content data;

associating a flag element with said content data, said flag element having at least one memory register;

downloading a portion of said content data to said first computing device; and manipulating said flag element to store at least one demarcation flag in at least one of said memory registers,

wherein said memory registers correspond to memory addresses on an addressable memory indicating the downloaded portion of said content data whereby the downloaded portion of the content data can be determined without accessing the content data.

31. (New) The method of claim 30, wherein said downloading step comprises instructions for downloading a portion of said content data that will fit into the available memory of said first computing device.

32. (New) The method of claim 31, further comprising the step of determining said available memory in said first computing device,

wherein said manipulating step comprises storing at least one of said demarcation flags in at least one of said memory registers corresponding to memory addresses demarcating a portion of said content data, said demarcated portion corresponding to said available memory of said first computing device, and

wherein said downloading step comprises downloading a portion of said content data in memory addresses corresponding to said demarcated portion.
